

Hydraulic Pump Units.

We have teamed up with the industry leading hydraulic valve block manufacturers Blain Hydraulics and Bucher Hydraulics to complement our existing relationship with power unit provider Biofial Hydraulics to provide a high quality range of Hydraulic Pump Units.

In terms of installation, adjustment and servicing costs, the control valve is often the single most significant component affecting the profitability of a hydraulic elevator. Refurbishing a hydraulic lift to achieve higher efficiency and lower energy consumption is a tricky operation that demands experience, knowhow and premium quality that only Shorts can deliver.

Blain EV100 Valve Block.

- The most reliable mechanical block on the market
- Available with A3 compliance with the addition of the L10 lock valve
- Fully supported by our in-house technicians
- Fully compatible with our stock Hydraulic Lift Controller

Bucher i-Valve Valve Block.

No more setting of hydraulic parameters is required resulting in a reduced installation time.

Up to 30% energy saving through continuous short travel curve, independent of load and temperature and in many cases no oil cooling or heating is necessary.

- A3 Compliant out of the box
- Fully supported by our in-house technicians
- Fully compatible with our stock Hydraulic i-Valve Lift Controller

Utilise Leading Modernisation Turnaround.
